- AudioBox 1818VSL**
- AudioBox 44VSL**
- AudioBox 22VSL**
- AudioBox iTwo
- AudioBox iOne
- AudioBox USB 96
- Revelator
- SW5E

This Universal Control 3.6.4 Installer will remove any previously installed version of Universal Control AI and AudioBox VSL software.

*NOTE: SMAART uses a firewire stream for the room analysis and firewire is not supported for AI/RM on M1.

**NOTE: AudioBox USB is a class compliant audio interface and does not require a special driver in order to function. It works without installing any software, and it will not appear in the Universal Control device browser. It will only appear in Sound Preferences and in Audio MIDI Setup.

***NOTE: Due to changes made by Apple in OS X 10.11 and later, the AudioBox VSL software will no longer function as designed. In order to continue to use the AudioBox 22VSL, 44VSL or 1818VSL on macOS 10.13 (or later), AudioBox VSL software must be completely removed from your computer. The AudioBox VSL software has been discontinued on all platforms, and Universal Control 3.6.4 does not include any VSL software mixing interface for the AudioBox products.

If you desire to use the Audiobox VSL software mixing interface features on OSX 10.8, 10.9 or 10.10, you will need to uninstall Universal Control 3.6.4 using the PreSonus Hardware Uninstaller script included with Universal Control 3.6.4 before proceeding with the re-install of older AudioBox VSL software.

Products not supported by Universal Control 3.6.4:

- StudioLive 24.4.2 Classic
- StudioLive 16.4.2 Classic
- FireStudio Project
- FireStudio Mobile
- FireStudio Lightpipe
- FireStudio Tube
- These products must use Universal Control 1.7.6

For more information on how to co-install Universal Control 3.6.4 and Universal Control 1.7.6 products, please visit our knowledge base at: https://support.presonus.com and search the word "co-install"

If installing drivers, a restart of your system will be necessary after installation completes.

NOTE: Universal Control 1.7.6 ends at macOS 10.14 (Mojave).
